Press release

LENZE UK gains Authorised Economic Operator status

Lenze UK has gained Authorised Economic Operator (AEO) status, the internationally recognised mark of quality in efforts within the international supply chain and custom controls procedures.

AEO status is an internationally recognised status from HMRC which shows a business role in the supply chain is secure and that their customs controls and procedures comply with EU standards. AEO status enables quicker access through custom procedures and the right to fast track shipments through custom safety and security measures.

In the event of a hard Brexit come October 31st, AEO status will provide reassurance to Lenze's customers and help to reduce any potential border delays.

Simon Cherry Lenze UK financial controller says, "No one really knows what will happen over the coming months and years as the government prepares for a no-deal Brexit. As a global business, it is vital that we put in as many measures as possible to ensure we minimise potential disruption in delivering our products and services."

About Lenze

Established 50 years ago in Bedford, Lenze Ltd now has 45 employees and achieves sales of about £20M in power transmission equipment from the Lenze factories and other quality suppliers. Services to UK customers include application engineering, software writing, training, commissioning and service

The Lenze Group is controlled via its holding company, Lenze SE, whose headquarters are in Aerzen, near Hamelin in Lower Saxony, Germany. Lenze is a globally active specialist in Motion Centric Automation, offering a comprehensive portfolio of products and services: everything from controllers and visualisation to electric drives and electromechanical applications, plus engineering services and tools, and it all comes from one source. Lenze's experts work together with the customer, designing integrated drive and automation solutions that simplify the realisation, production and servicing of machines. Lenze is one of the few suppliers in the market who support the machine builder in all phases of the machine-building process.

Employing around 3,700 people worldwide, Lenze is represented in 60 countries by its own sales companies, development sites and production plants, backed by a network of service partners. The main headquarters are in Germany, with a large research and development division, two production sites and a logistics centre that supplies customers in north-eastern Europe. The customers are supported by an international network of sales and application engineers.
