

Industry 4.0 since 1947 - Lenze at a glance

Since its foundation in 1947, the globally operating family-owned company Lenze has been on a growth course and is one of the leading automation companies for machine construction. Lenze is one of the few suppliers on the market to offer a consistent and scalable product and service portfolio. This includes high-quality mechatronic products and packages as well as high-performance systems for machine automation. It ensures standardized data communication right up to connectivity into the cloud. Lenze's tools and digital services enable not only secure data analysis, but also new digital business models. The basis for this are the internationally networked experts who understand the requirements and tasks of customers and machine operators. More than 70 years of experience and comprehensive industry know-how flow into individual and innovative automation concepts for machines and systems worldwide. More information is available on the Lenze website at www.lenze.com.
